Name of Person Who Submitted it: Kyle Miller

Reflection

I was in charge of doing both reports while my partner was in charge of the code. I was initially responsible for the GUI although I spent hours trying to do it but it failed, so that's when my partner took responsibility in helping me out and doing that section himself.

Overall as a group, the experience seemed extremely stressful especially when it was getting closer and closer to the deadline. It was a little bit hard though when our group consisted of two people only although we were able to manage pulling it off.

If I had the chance to restart, I definitely would've looked more into what I needed to do and to try and understand the task so I would have been able to contribute more than what I ended up doing. I would also try using another communication format that isn't just canvas messages so texts can be sent easily.

Throughout the work process, we've both learned a lot more about pygame and about GUI's through this project. My partner got to experience and practice more with classes, objects, and creating proper methods while I learned my main weakness in the course of using GUI's, and I hope to improve that in the future after this course.
